Back in the early 1980's, OK International developed the first machine to convert gusseted rolls of polyethylene film into leak proof 5-seal block bottom bags, which has become the industry standard in semi-liquid applications and the core of our packing lines.

Today, we are the only company in the world that designs and manufactures complete turnkey bag-in-box packing lines consisting of case erectors, bag inserters, fillers, bag closers, case sealers and conveyors, predominantly in stainless steel.

This, in combination with our expertise in corrugated cases and polyethylene film, provides you with the ultimate single source solutions, the perfect package.
